

there's nothing that works for
all datasets. EDA is human dependent
& its the ART part

↓
its easy to apply a bunch
of ops to dataset, EDA is hard.

Amazon hires stats, physics people
even if they don't know ML. Because
they can perform proper EDA.

EDA → ask the right questions → if you're smart
→ right tool to answer. enough to do this, tool
↓ part is easy.
doesn't matter.

Training a model is too easy
EDA is a place for real smart
people to shine.
